Transport Rollex Ltee EPA ID# NYF006000053
910 Lionel-Boulet Blvd.
Varenes, QC
J3X 1T6

Waste Minimization

The following conditions have contributed to the decreased amount of waste generated over the past few years:

1. We have increased the amount of rinse cycles on the plating baths to decrease the amount of waste generated from the plating lines.
2. Nickel and cyanide are collected in dragout tanks and transferred back into the plating baths which has decreased the amount of hazardous waste generated.
3. The waste is dried before shipping to decrease the total volume of the hazardous waste.
4. Over the past year most of the plating operations have been moved back to the facility in New Jersey.

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment."

Sincerely,

Sherry Schirripa
